

Before setting up, read the Safety precautions on the INSTALLATION MANUAL and INSTRUCTION BOOK.

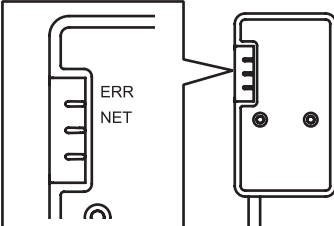

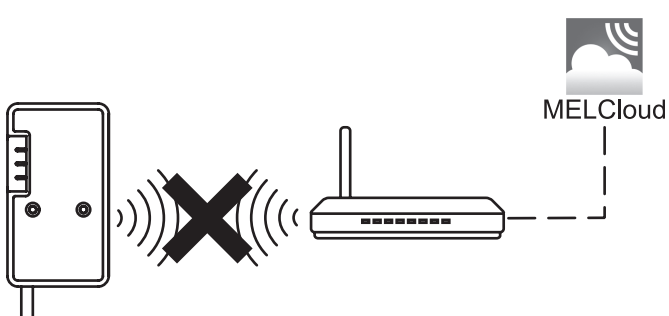

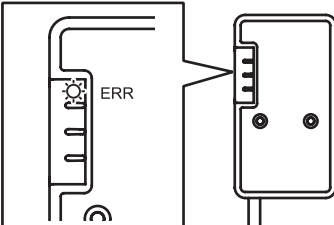

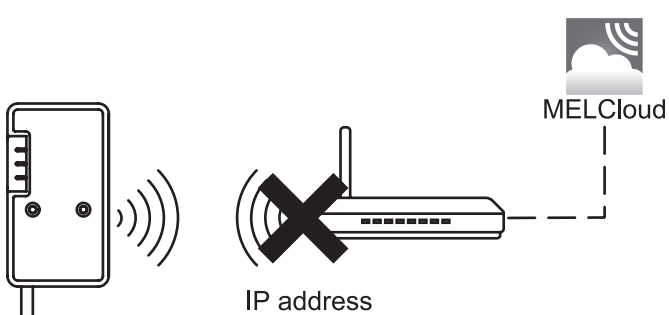

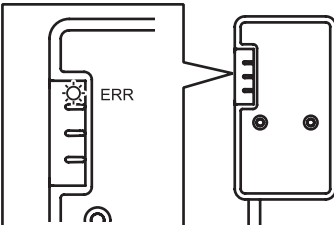

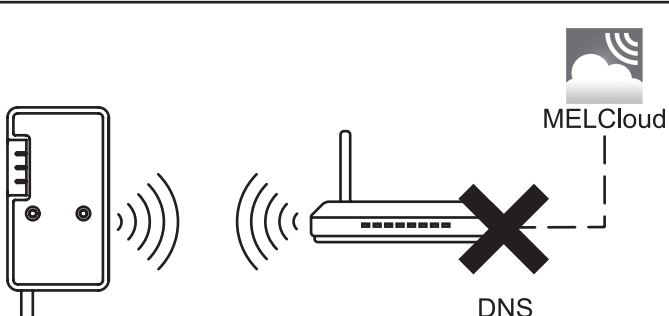

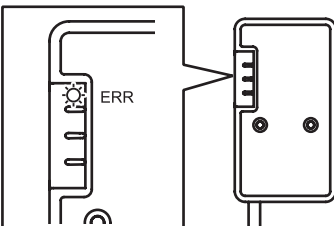

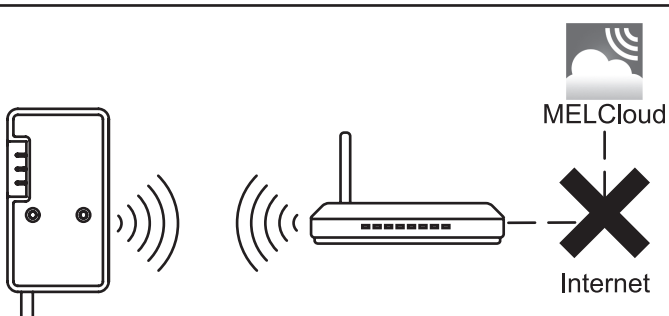

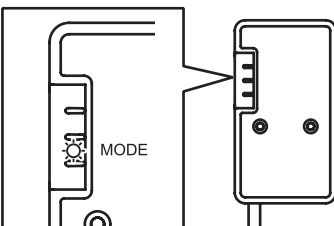

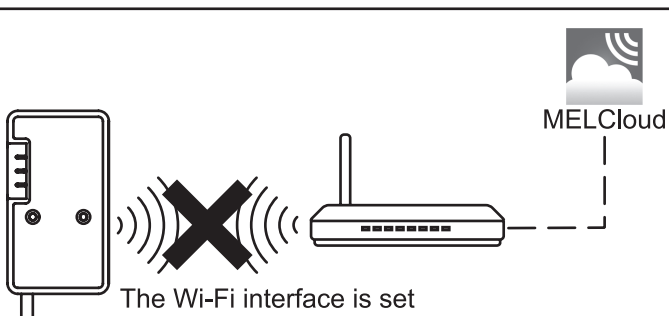

For SETUP MANUAL and MELCloud User Manual, please go to the website below.  
<http://www.melcloud.com/Support>

### SETUP

 ON  Flashing

# Troubleshooting

<p>ERR: OFF NET: OFF</p> 		<p>Try pairing the Wi-Fi interface with the Router.</p>
<p>ERR: Flash (Every 0.5-sec)</p> 	 <p>IP address</p>	<p>Check DHCP settings of the Router. or Check IP address settings of the Wi-Fi interface.</p>
<p>ERR: Flash (Every 1 sec)</p> 	 <p>DNS</p>	<p>Check DNS settings of the Router. or Check DNS address settings of the Wi-Fi interface.</p>
<p>ERR: Flash (Twice every 5 sec)</p> 	 <p>Internet</p>	<p>Check if the Router is connected to the Internet.</p>
<p>MODE: Flash (Once every 5 sec)</p> 	 <p>The Wi-Fi interface is set to Access point mode</p>	<p>Push MODE switch of the Wi-Fi interface for 7 seconds. Try pairing the Router again if the Wi-Fi interface is not connected.</p>

## 2. Setting up

For details of switches and LEDs, refer to 2. Product Introduction on INSTALLATION MANUAL.

### 2-1. Initial state

Turn on the breaker of air conditioner or the ATW unit.  
After LED indication enters the initial state shown on right, the Wi-Fi interface can be paired to the Router.  
Refer to 3. LED pattern when LED indication does not enter the initial state.  
Note: It may take a few minutes to enter the initial state.

Initial state

ERR	OFF
NET	OFF
MODE	OFF
UNIT	Flashing

### 2-2. Selecting a mode

The Wi-Fi interface must be paired to the Router in order for communication between the indoor unit and MELCloud to begin. There are 3 methods of pairing the Wi-Fi interface to the Router:

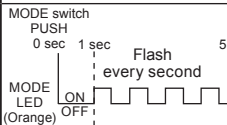

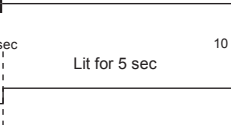

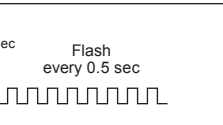

- WPS-PUSH mode
- Access point mode
- WPS-PIN mode

The mode to be set depends on whether your Router has the WPS button.

Please use the pairing mode most suitable for your system.

Follow the table below to set the pairing mode with the MODE switch.

Set up the Wi-Fi interface and the Router again from 2-2. when the Router has been replaced.

With WPS button	Without WPS button	
WPS-PUSH mode	Access point mode	WPS-PIN mode <small>Refer to 2-5. first to set up WPS-PIN mode.</small>
 <p>MODE switch PUSH 0 sec 1 sec 5 sec Flash every second MODE LED (Orange) ON OFF</p>	 <p>Lit for 5 sec</p>	 <p>10 sec Flash every 0.5 sec</p>
Release within a range of 1 to 5 seconds.	Release within a range of 5 to 10 seconds.	Release after 10 seconds.
MODE LED flashes every second.	MODE LED flashes every 5 seconds.	MODE LED flashes every 0.5 seconds.
Proceed to 2-3.	Proceed to 2-4.	Proceed to 2-5.
Cancel Operation		
Push RESET switch for 2 seconds to return to initial state in 2-1.	Push MODE switch again for 5 to 10 seconds to return to initial state in 2-1.	Push RESET switch for 2 seconds to return to initial state in 2-1.

### 2-3. Setting up in WPS-PUSH mode

1. Make sure that the LED indication is as shown below.  
Push WPS button of the Router within 2 minutes after the mode selection in 2-2. has completed.  
The WPS-PUSH mode will return to initial state in 2-1. if WPS button is not pressed for 2 minutes.

2. LED indication will be as shown below when connection between the Router and Wi-Fi interface is completed and connection to MELCloud starts.  
Note: LED indication will return to initial state in 2-1. if the connection fails.

3. LED indication will be as shown below when the connection is completed.  
Note: It may take several minutes to show the indication below.

Main Causes that WPS failed are as follows.

Communication distance (from the Wi-Fi interface to Router), Router settings (encryption, authentication, limit of connections, etc.)

For more information, refer to Troubleshooting in 3. LED Pattern.

## 2-4. Setting up in Access point mode

1. Make sure that the LED indication is as shown below.

On the Wi-Fi Setting Screen on your smartphone, select SSID and enter KEY, which are printed on the label of the Wi-Fi interface.

Notes:

- It may take time to show the indication below.  
(About 30 seconds for air conditioner, 60 seconds for ATW unit)
- Check Wi-Fi setting of your smartphone if SSID does not appear on it.
- Enter KEY again if SSID appears on your smartphone, but it cannot connect to the Wi-Fi interface.

LED indication

2. Scan matrix barcode on the label of the Wi-Fi interface or type URL (<http://192.168.11.1/network>) in web browser.

3. In the displayed window, select Dynamic in DHCP (\*1) and enter the information of Router, then tap the Submit button.

Notes:

- If you want to use Static, select Static in DHCP (\*1) and enter the information of Router and network, then tap the Submit button.
- LED indication will return to initial state in 2-1. if the connection fails.

4. LED indication will be as shown below when the connection is completed.

Note: It may take several minutes to show the indication below.

(If the indication does not change, push RESET switch for more than 10 seconds, e.g. 14 seconds, to restart the setup from 2-1.)

LED indication

## 2-5. Setting up WPS-PIN mode

1. Before using WPS-PIN mode, the PIN code of the Wi-Fi interface needs to be set on the Router. Refer to Router's manual to enter the PIN.
2. Push MODE switch for more than 10 seconds and release to set WPS-PIN mode.
3. NET and UNIT LEDs flash (every 5 sec) when the connection is completed.

Notes:

- Please make sure that the Router supports WPS-PIN mode.  
Not all Routers supports WPS-PIN mode.
- Push RESET switch for 2 seconds to reset the Wi-Fi interface if LED indication does not change after 5 minutes.
